欧勃亚园艺实业有限公司

OBOYA HORTICULTURE INDUSTRIES CO., LTD

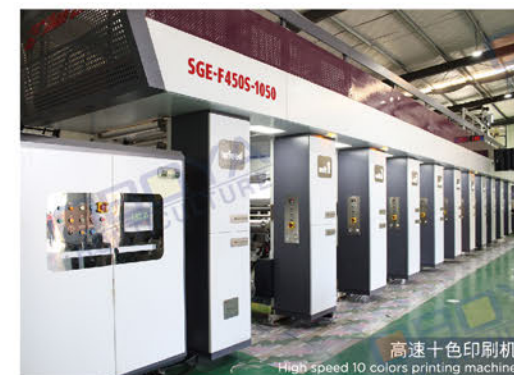

欧勃亚园艺实业有限公司是一家国际化的制造集团企业。集鲜花、果蔬种植、食品包装行业的综合供应商，为全球八十多个国家的客户提供种植资材配套、食品包装材料和物流周转及展示产品。

公司创建于 2006 年，在中国拥有全资的研发制造和销售公司。在肯尼亚、波兰、瑞典、挪威、厄瓜多尔等国家成立公司，在哥伦比亚、巴西、秘鲁、智利、墨西哥有销售办事处。

Oboya Horticulture Industries is a multinational manufacturing company. Oboya provides One-Stop Shopping supplies for Flowers, Vegetables Growers, Packaging Companies, Importers, Exporters and Wholesalers in more than 80 countries around the world by supplying daily packaging materials, substrates, buckets, pots, trays, trolleys and displays.

Founded in 2006, Oboya has manufacturing facilities as well as sales organizations in China. In overseas market, we have our own companies in Kenya, Poland, Sweden, Norway, Ecuador ect. And in Colombia, Brazil, Peru, Chile, Mexico. we have sales organizations.

SOLAR ENERGY

没有什么东西比能源更珍贵了。我们非常清楚这一点，所以我们觉得有必要做一些事情来使我们的业务在环境方面可持续发展。

2021年10月，我们启动了青岛工厂的太阳能光伏发电的项目，并于2022年1月完成了第一阶段的安装。

该太阳能光伏发电项目约3000 M²在欧勃亚厂房楼顶铺设，建成后的太阳能光伏站装机容量265千瓦，每年可发电36万千瓦时以上。除了它产生的能量之外，它不会产生任何排放物，将热量转化为能量不会排放任何二氧化碳或其他有害元素。

我们可以实时看到二氧化碳排放量的减少，根据我们的计算，每天大约减少1000公斤的排放。

POWER PROJECT

Few things are becoming more precious than energy sources. Oboya is very much aware of that. That's why the company felt the need to do something that would make the business future-proof and environmentally sustainable.

In October 2021, we started the project to solar power our factory in Qingdao, China and completed the first phase of the installation on January 2022.

The solar photovoltaic power generation project is about 3000 M², which is laid on the roof of Oboya factory building., has a capacity of 265 kilowatts, and each year, it will generate electricity, at least 360,000KW, And on top of the energy that it is generating, it doesn't produce any emission: the conversion of heat into energy does not emit any carbon dioxide, or other harmful elements.

we can see the reduction of CO₂ emission in real-time and based on our calculation, it is round 1000kg per day.

太阳能光伏发电项目

质量管理体系ISO9001:使产品的全部质量工作有可知性、可见性和可查性。
Quality management system ISO9001: Make all quality work of products knowable, visible and traceable.

GRS认证:GRS即GLOBAL RECYCLED STANDARD，是全球回收标准的简称。以提高产品的透明度，满足客户及消费者的知情权，便于消费者选择。
GRS certification: GRS is global recycled standard, which is the abbreviation of global recycling standard. In order to improve the transparency of products, satisfy customers' and consumers' right to know and facilitate consumers' choice.

FSC森林认证:保证从树木的开采到最终的包装的追溯性。
FSC forest certification: ensure the traceability from the exploitation of trees to the final packaging.

BRC证书:BRC食品安全全球标准作为全球领先标准已被123个国家超过22000个供应商采用作为衡量产品质量、安全和操作标准的依据，并确保制造商履行法律义务和给消费者提供应有的保护。
BRC certification: BRC global food safety standard, as a global leading standard, has been adopted by more than 22,000 suppliers in 123 countries as the basis for measuring product quality, safety and operating standards, and ensuring manufacturers to fulfill their legal obligations and provide consumers with due protection.

SEDEX 是供货商商业道德信息交流的缩写形式 (Supplier Ethical Data Exchange)。Sedex 是一套网络数据库，用于帮助各公司储存其业务范围内的劳动准则信息，而且他们的客户也可以共享这些信息。
SEDEX certification: SEDEX is Supplier Ethical Data Exchange, which aims to facilitate the storage of labor standards information within companies' business scope and enable their customers to share this information.

OK Recycled 认证体系特别规定了在可追溯性协调系统的基础上计算塑料产品回收含量的要求。目标是支持塑料材料的环保使用，为公司的可持续发展承诺提供可信度。
The OK Recycled certification system specifies, in particular, the requirements for calculating the recycled content of plastic products on the basis of a harmonized system of traceability. The goal is to support the environmentally friendly use of plastic materials and lend credibility to the company's commitment to sustainability.

碳足迹证书:更好的了解公司运营过程中的碳足迹，并减缓气候变化
Carbon footprint certification: better understand the carbon footprint of the company during its operation and mitigate climate change.

Substrates

Coco Peat
Peat Moss
Specialized Substrates

椰糠

泥炭

专用基质

Coco peat 5kg Bricks
5千克椰糠

Coco peat 650g Bricks
650克椰糠

Coco Chips 5kg Bricks
5千克粗椰块

Coco peat Grow Bags
椰糠栽培袋,加水膨胀后直接种植
(根据客户需要提供各种尺寸)

Coco type 类型	Specification 规格	EC	PH	Compression ratio 膨胀比	Characteristic 产品特点
Coco Peat 椰糠	Washed cocopeat 水洗	0.6	5.5-6.5	1:5	Excellent water holding capacity.Suitable for most plants. 保水性好,适合多数植物育苗,花卉、蔬菜及瓜果种植, 既可单独作为基质,也可与其它基质搭配使用。
	Buffered cocopeat 深加工 (缓冲)	0.3	5.5-6.5	1:5	Na ⁺ and K ⁺ are removed from coco CEC-complex.Very safe to young roots. 对植物更安全,适合各类植物育苗和对盐分较敏感的 植物,使后期水肥管理更方便。
Coco Chips 椰块	Washed coco chips 水洗	0.6	5.5-6.5	1:5	Basis for larger pot sizes for higher air content. Can be blended with cocopeat or peat moss to increase the AFP. 透气性好,适合种植根系需更多空气的植物,常与椰糠 混合使用,增强基质的通透性,也能单独作为基质使 用,可取代树皮。
Grow Bags 栽培袋	Washed/ Buffered 水洗/ 深加工 (缓冲)	0.3-1	5.5-6.5	1:5	Direct planting, no need flower pot or other containers. It is not only suitable for home balcony planting, but also commonly used in three-dimensional agriculture in greenhouse facilities. Ideal for planting of Strawberry, Tomato, Cucumber, Eggplant ect. Planting and drainage holes can be customized as needed. 不需花盆等容器,直接种植。既适合家庭阳台种植,又 常用于温室设施立体农业,常搭配滴灌,用于草莓、西 红柿、黄瓜、茄子等作物的种植,可根据需要订制种植 孔和排水孔。

OBOYA COIR PROCESS CHART

欧勃亚椰糠加工流程

THE ADVANTAGES OF OBOYA COIR SUBSTRATES

欧勃亚椰糠优点

1.PRODUCT SOURCE 产品来源

Pure natural Coconut are renewable resources, it has better water holding capacity and ventilation.
纯天然椰壳原料,为可再生资源,与其它基质相比,椰糠具有更好的保水性和透气性。

2.STABLE CHARACTERISTIC 性质稳定

After six months storage, substances that are not conducive to plant roots are completely degraded. Make the internal structure reach a stable state, but keep the volume same as before.
产品经过半年时间的储藏,使不利于植物根系的物质完全降解,同时使椰糠的内部结构达到稳定状态,使用过程中体积不会减少。

3.CLEAN STORAGE 清洁存储

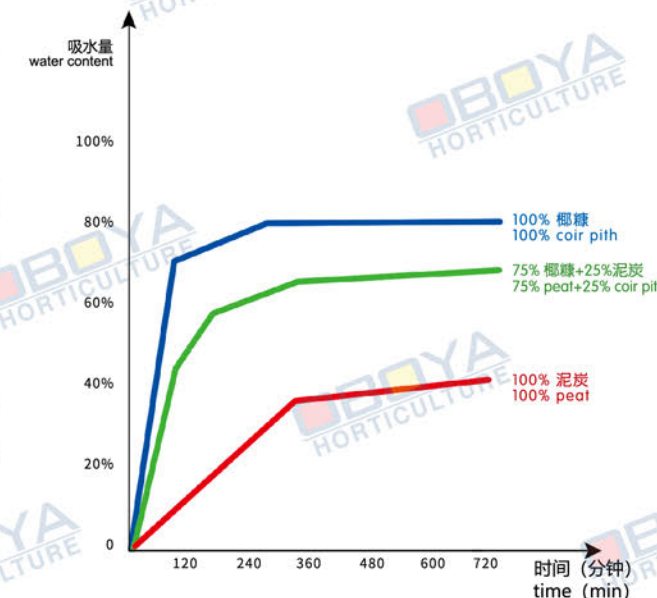

Controlled storage on concrete floors surrounded with walls to avoid contamination.
产品所有加工、存储、晾晒等工序都在清洁的混凝土地面上完成,杜绝污染,避免泥土沙石混入椰糠产品中。

4.CLEAN WATER TREATMENT 清洁水处理

Coco products of high salinity are washed by filtered groundwater until the EC value below 0.5 mS/cm.
采用过滤后的地下水为椰糠v,水质好,无污染,盐分洗脱效果好,多次水洗至椰糠EC值(盐度值/电导率)小于0.6mS/cm,确保对植物足够安全。

5.HIGH COST PERFORMANCE 高性价比

Fully dried, low moisture, larger expansion ratio after adding water.
产品晾晒充分,水分含量低,加水后膨胀比更大。

不同基质的吸水程度对比
Comparisons of the water absorbing capacities of different substrates

*说明:产品采用650g或5kg压缩块,可用托盘/散装,可根据客户要求制定不同规格。
*Description: The product adopts 650g or 5kg compression block, available in pallet/bulk, and different specifications can be made according to customer requirements.

Product 品名	Application 适用范围	Structure 苔藓粗细度	PH	Fertilizer 营养启动剂	Wetting agent 保湿剂	Bag size 规格
Oboya Peat 1 欧勃亚1号	Sowing (flowers, seedlings vegetables, etc.) 播种、育苗(花卉、苗木、蔬菜等)	0-10mm	5.5-6.5	0.5KG/m³	Added 已添加	250L/Bag 250升/包
Oboya Peat 2 欧勃亚2号	Small potted plants, cuttings, tissue culture seedlings, hardening seedlings vegetable planting, etc. 小盆栽、扦插、组培苗、炼苗、蔬菜 种植等	0-20mm	5.5-6.5	1.0KG/m³	Added 已添加	250L/Bag 250升/包
Oboya Peat 6 欧勃亚6号	Medium and large potted flowers, seedling cultivation, tree cuttings, greening of large flower beds, etc. 中大型盆栽花卉、苗木栽培、 树木扦插、大花坛绿化等	10-30mm	5.5-6.5	1.0KG/m³	Added 已添加	250L/Bag 250升/包
Oboya Peat 8 欧勃亚8号	Large potted flowers, shrubs, trees, flowers with high ventilation requirements (anthurium, pineapple, etc.), etc. 大型盆栽花卉、灌木、乔木、对透气 要求较高的花卉(红掌、凤梨等)等	20-40mm	5.5-6.5	1.0KG/m³	Added 已添加	250L/Bag 250升/包

PRODUCT DESCRIPTION

产品说明

1.MATERIAL 选材

OBOYA substrate is made of 100% Baltic sphagnum peat, which contains an organic content of more than 98%.
欧勃亚泥炭基质选用波罗的海水藓泥炭加工制成,有机质含量高98%。

2.FERTILIZER 营养启动剂

Many scientific experiments indicate adding start fertilizer in peat moss can significantly improve the growth, proper amount of fertilizer including NPK and trace elements is added in all the OBOYA peat products.
大量试验表明营养启动剂对植物生长优势明显,欧勃亚泥炭已添加含N、P、K及微量元素的营养启动剂。

3.EC

The EC level of raw material sphagnum peat is less than 0.1mS/cm, it will rise to 0.3 mS/cm after adding 1.0 kg/m3 of fertilizer.
未添加营养启动剂的泥炭EC值低于0.1,加入1.0Kg/m³营养启剂的泥炭EC值约为0.3。

4.PH

The original pH of Baltic sphagnum peat is c.a.4.0, to meat the requirements of most plants, we adjust the pH level to 5.5-6.5.
波罗的海水藓泥的PH值约为4.0,欧勃亚泥炭PH值已调至5.5-6.5,满足大部分植物的种植要求。

5.WETTING AGENT 保湿剂

All products contain appropriate wetting agent, this will help substrate to absorb water easily.
所有产品均添加保湿剂,防止基质过干后不吸水。

6.PACKING 规格

Slightly compressed in 250L bags or 6000L bales.
压缩包装250L,6000L。

欧勃亚泥炭由波罗的海水藓泥炭制成，有机质含量高达98%，由于水藓植物具有很大的细胞组织结构，因而采用水藓植物制成的基质持水能力可达到其自身重量的15-20倍左右，这不仅可确保植物根系水份的供应，同时，肥料也不易流失，保证了植物肥水的持续性和稳定性。

Oboya substrate is made of 100% Baltic sphagnum peat, which contains an organic content more than 98%. Because of the large cellular structure in Sphagnum, the water-holding capacity of the substrate made of sphagnum can reach 15-20 times more than its own weight. This can not only ensure the water supply to root, but also keep the fertilizer not run off, ensuring the continuity and stability of water and fertilizer supply.

欧勃亚水藓泥炭由纯雨水浇灌而成，EC值小于0.1mS/cm，加1.0Kg/m³营养剂的泥炭EC值约为0.3Kg/m³，这有利于现代园艺生产过程中营养液的精确配制。产品添加了大量元素、微量元素和保湿剂，为规模化生产提供保证也使家庭园艺栽培更加简便。

Oboya substrate is watered by pure rainwater, and its EC level is less than 0.1mS/cm. With adding 1.0Kg/m³ nutrient nutrient, the EC level is around 0.3kg/m³, this helps to do precise preparation of nutrient solution for modern horticultural production process. The product has added a large number of elements, trace elements and humectants, which guarantees large scale production and makes home gardening easier.

欧勃亚泥炭产品在开采、筛选分级、加工混合、检测、包装过程采用全自动化生产线，充足的产能保证稳定供货，国际领先的采收方式保证了产品质量的均匀性和稳定性。

欧勃亚泥炭在生产过程中持续的对pH、EC、结构等参数进行严格的质量控制，经公司实验室和检测部门检验后方可包装运输，不同批次的产品经实验室检测并进行试种实验，试种涵盖蔬菜、花卉、苗木等。

Oboya substrate has strictly quality control on PH, EC level, structure ect. Before packaging and transportation, all products are being checked by our own labs and cross-checked in certified labs. Different batches of production will be firstly tested through growing vegetables, flowers, plants ect.

Oboya substrate use fully automated production lines in the process of mining, screening and grading, processing and mixing, testing, and packaging. Sufficient production capacity ensures stable supply, and the international leading harvesting method ensures the uniformity and stability of product quality.

INSTRUCTIONS AND PRECAUTIONS FOR USE 使用指导及注意事项

1. The product can be used for sowing seedlings, potted flowers, soilless cultivation, lawn greening, etc. Generally, peat of 0-10mm is used for seedling raising. Others can choose peat with thicker fibers according to the growth habit of cultivated plants, especially the requirements for ventilation. It can be used with perlite, sand, coconut bran, etc. as required.
2. As a cultivation medium, the added fertilizer is only the start-up fertilizer. During the planting process, it is necessary to fertilize regularly according to the fertilizer requirement of the plants.
3. Imported peat is generally packaged in compression (1:2). Before use, the peat should be fully dispersed to make it expand and recover. Care must be taken during the dispersing process so as not to damage the porous structure of the peat. If necessary, add slow-release fertilizer or other additions can be done simultaneously.
4. Peat has a strong ability to retain water and fertilizer. When planting plants that are sensitive to fertilizer and water, attention should be paid to controlling the amount of fertilizer and water.
5. It is not easy to absorb water again after the peat is air-dried. It is best to use up the peat after opening the package, avoid long-term storage, and pay attention to sealing in time for short-term storage.
6. The environment of the origin of imported peat is strongly acidic, and most harmful organisms cannot survive. There is no need to disinfect before use, but during the storage process, pay attention to the sanitation and tidy storage environment.
7. The pH value of naturally mined Baltic peat is about 3.5-4.5, and it is adjusted to 5.5-6.5 by default during processing, which is suitable for the growth of most plants, and also provides natural acid peat.

- 1、产品可用于播种育苗、盆栽花卉、无土栽培、草坪绿化等，育苗一般选用0-10mm的泥炭其它可根据栽培植物的生长习性特别是对通气性的要求，选用纤维较粗的泥炭，同时根据需要可以配合珍珠岩、沙子、椰糠等使用。
- 2、泥炭作为一种栽培介质，已加入的肥料仅为启动肥，种植过程中需根据植物的需肥规律定期施肥。
- 3、进口泥炭一般采用压缩包装(1:2)，使用前应将泥炭充分打散使其膨胀复原，打散过程要小心，尽量不破坏泥炭的多孔结构，若有需要，添加缓释肥或其它添加物可同步进行。
- 4、泥炭的保水保肥能力很强，种植对肥水敏感的植株要注意控制肥水用量。
- 5、泥炭风干后不容易再次吸水，凡打开包装的泥炭最好一次用完，避免长时间存放，短期存放也要注意及时封口。
- 6、进口泥炭产地环境呈强酸性，大部分有害生物不能存活，使用前无需消毒，但在存放过程中要注意存放环境卫生整洁。
- 7、自然开采的波罗的海泥炭pH值约为3.5-4.5，加工过程中默认调至5.5-6.5以适于多数植物生长，另外也提供天然酸性泥炭。

(1) 本品具有良好的透气性和持水保肥能力, 促进植物根系发达, 生长旺盛, 利于产量增加。

(1) This product has good air permeability and water and fertilizer retention capacity, promoting the development of plant roots and vigorous growth, which is conducive to the increase of yield.

(2) 有机质含量高, 耐分解, 更利于结合水肥一体化的生长管理。

(2) High content of organic matter, resistant to decomposition, which is more conducive to the integrated growth management of water and fertilizer.

(3) 本品无有害病原菌、虫卵及杂草种子, 便于生产管理, 节约成本。

(3) This product is free of harmful pathogenic bacteria, insect eggs, and weed seeds, facilitating production management and saving costs.

PRODUCT DESCRIPTION 产品说明

所有原料经高温灭菌, 无虫卵和杂草种子, 无毒无异味, 质地疏松, 富含有机质, 养分元素全, 酸碱度适宜, 使用安全, 稳定性好。结合种子及幼苗的生长特性, 科学配制各类营养元素, 可持续为幼苗提供最优的生长环境。

All raw materials are sterilized at high temperatures, free from insect eggs and weed seeds, non-toxic and odorless, with a loose texture, rich in organic matter, full of nutrients, suitable acidity and alkalinity, safe to use, and good stability. Combining the growth characteristics of seeds and seedlings, scientifically formulated various nutrients to provide the optimal growth environment for seedlings in a sustainable manner.

1. 萌芽快, 出芽率高, 苗齐苗壮素质好。
2. 移栽后无缓苗期, 成活率高, 且省工省时, 节本增效。
3. 持水保肥能力, 促进植物根系发达, 生长旺盛, 利于产量增加。

1. Fast germination, high germination rate, and good quality of seedlings.
2. After transplantation, there is no slow seedling stage, with a high survival rate, and it saves labor and time, saving costs and increasing efficiency.
3. The ability to hold water and maintain fertilizer promotes the development of plant roots and vigorous growth, which is beneficial for increasing yield.

SPECIFICATIONS 规格

操作尺寸440*最高1670/最低1100MM

ADVANTAGE 优点

The efficiency of bagging flowers with OBOYA flowers sleeve clips is 2.5-4 times than that of common bagging method. Average packaging time is less than 1 second.

使用OBOYA夹袋器套袋的效率是普通套袋方式的2.5-4倍, 平均每次套袋时间≤1秒钟。

STEP 1

Before using the flower sleeves clip, please firstly confirm the packaging sleeve has wicket on it.

在使用夹袋器之前, 先确保包装袋带有悬挂。

STEP 2

Lift the "black part" upward to horizontal, put a bundle of flower sleeves (around 50pcs or 100pcs) on it, please make sure the perforation of the packaging sleeves lower than the edge of the yellow clip.

将“黑色部分”向上抬起至水平, 在上面放一打花袋(约50个或100个), 请确保包装袋的虚线低于黄色夹子的边缘。

STEP 3

Close the clip and double check whether the packaging sleeves were clamped well and perforation was under the edge of the yellow clip.

合上夹子, 再次检查包装袋是否卡紧, 虚线是否在黄色夹子下面。

STEP 4

Adjust the height of the middle plate, it can be adjusted based on the height of flowers. When filling potted flowers, it's recommended to be 3-5cm below the bottom edge of the bag; When filling cut flowers, it's recommended to be 3-5cm below the bottom of the lower stem.

调整支架的中间板的高度, 可以根据所装花卉的高度而订。装盆花时, 建议低于袋子底端3-5cm; 装切花时, 建议低于花茎底端3-5cm。

STEP 5

Open one piece of the bag with one hand, and put the flowers in it with the other hand. Note: potted flowers can be put down by grasping the flowerpot with the forehead, and those with higher plants can be put down by grasping the flowers with the backhand; Fresh cut flowers need to be put down backhand.

一只手拨开袋子的一片, 另一只手将花放进去, 注: 盆花可以正手抓着花盆向下放, 植株比较高的可以反手抓花向下放; 鲜切花则需要反手向下放。

STEP 6

When the flowers completely fall into the bottom of the bag, gently push down, and the bag will fall from flower sleeve clip together with the flowers. Then the middle supporting plate below will hold the flowers from falling directly on the ground.

花完全落入袋子底部时, 向下轻轻用力袋子会与花一起从夹袋器上落下来, 下方的托板会托住花卉不至于直接落在地面。

HORIZONTAL SINGLE ROWS DELEAVING MACHINE 单排除刺机

SIZE 尺寸

555*285*285mm

WEIGHT 重量

36kg

POWER 功率

375w

PURPOSE 用途

According to different types of flowers, can work for 20pcs-40pcs flowers at the same time.
可同时处理20-40支切花,可根据花卉的不同种类,随时更换毛刷。

HORIZONTAL DOUBLE ROWS DELEAVING MACHINE 双排除刺机

SIZE 尺寸

805*285*285mm

WEIGHT 重量

40kg

POWER 功率

375w

PURPOSE 用途

According to different types of flowers, can work for 20pcs-40pcs flowers at the same time.
可同时处理20-40支切花,可根据花卉的不同种类,随时更换毛刷。

BRUSHES 毛刷

PURPOSE 用途

Soft brush suit for defoliating of flower, such as carnation, Lily.
Hard brush suit for flowers with thorns, such as roses.
软毛刷适合去除鲜切花花叶,如康乃馨、百合;硬毛刷适合去除鲜切花花刺和花叶,如玫瑰等。

VERTICAL DELEAVING MACHINE 立式除刺机

SIZE 尺寸

850*440*1050mm

WEIGHT 重量

50kg

POWER 功率

375w

PURPOSE 用途

According to different types of flowers, can work for 20pcs-40pcs flowers at the same time.
可同时处理20-40支切花,可根据花卉的不同种类,随时更换毛刷。

BINDER 扎捆机

SIZE 尺寸

350*440*650 mm

WEIGHT 重量

30kg

VOLTAGE 电压

200-240V/50Hz 110V/60Hz

PURPOSE 用途

It is suitable for the rapid bundling of a variety of flowers, and provides the guarantee of assembly line operations for fresh-cut flower production enterprises.
适用于多款鲜花的迅速捆扎,为鲜切花生产企业提供流水线作业的保障。

DRIP IRRIGATION SYSTEM
滴灌系统

Drip irrigation is the most efficient water and nutrient delivery system for crops. Thanks to drip irrigation, growers can grow higher yield and quality crops while conserving water, fertilizer and labor.

滴灌对于作物来说是最有效的水分和养分输送系统。得益于滴灌，种植者在种出更高产量和品质作物的同时，还能够节约用水、肥料和人工。
